

Weather Station Interface

The Vantage Pro Weather Station interface will help you manage all of your weather data. In addition to measured weather data, specific to your area, it will automatically log the forecast each day, including rainfall, wind speed and wind direction.

Other interfaces:

- Precision Planter 20/20
- Apex
- Ag Leader

Requirements & Recommendations

While the only hardware requirements are a PC, printer and high-speed Internet access, we do recommend you evaluate your method of labeling your fields.

Measurement to Management

FIELDS AND CROPS MANAGER

Field and Crops Manager software is an Internet-based software that can help you organize all of your crop information in an easily accessible, centralized location. Internet-based means that you can run it from any location where there is a high-speed Internet connection, and that you are always running the most current version.

See the Fields and Crops Manager demonstrations on YouTube by searching for Fields & Crops Manager Part 1 and Fields & Crops Manager Part 2 on the YouTube search line.

Keep all crop information in one place, including:

- Rotation History
- Soil Test Results
- Fertility Applications
- Chemical Applications
- Harvest data

Have immediate access to many standardized reports:

- Crop Rotation Worksheet
- Planting Worksheet
- Crops by Field Report
- Crop by Variety by Planted Date
- Manure Spreading Work Order
- Harvest Worksheet
- Harvest by Field or by Field/Cutting
- Nutrient Change Summary (requires multiple years of soil tests)
- Input Costs by Field

Dairy One

Measurement to Management

Efficient data entry of your cropping activities

Both mouse and keyboard entry methods are supported.

You are a good candidate for Fields and Crops Manager if you want to:

Improve on your spreadsheet records

The special relational database in the program offers sophisticated routines that allow you to enter information more quickly and create reports more easily. And you can also send much of the Fields & Crops information to a spreadsheet for your own unique manipulation.

Track your manure applications and the nutrients it contributes

Fields and Crops Manager understands manure and the "Manure Spreading Work Order" report makes it easy to give spreading instructions and to record and track applications.

Create FSA reports quickly and easily while using your own numbering scheme to manage

Keep your FSA Farm, Tract and Field numbers out of the way until you need to print reports for FSA.

Make lists of fields based on soil test results

Get rid of that pile of soil test results and easily make a list of fields that are due to be sampled, or fields that meet a specific soil test criteria.

Other Advantages

1. If you have PDFs of your field maps, we can make them accessible from your Fields and Crops Manager program. While this software does not create field maps or handle geospatial data, it can read in as applied data from APEX, AG LEADER, and Precision Planting 20/20 systems.
2. Fields and Crops Manager allows for tracking overhead, seed, spray, and fertilizer costs.
3. The program will calculate the N, P, and K you apply to your fields with manure and fertilizer.
4. Any tablet, including the iPad, with a remote desktop application can run Fields and Crops Manager.

Field Identification

If you do not already have a field numbering system, we recommend implementing one as you start running Fields & Crops Manager. The ideal way to communicate clearly and record activities quickly is with field numbers complimented by long names. We can help you get started on a field numbering system that will fit your cropping needs.

Compliance Records

Many farms rely on Fields & Crops Manager to keep their CAFO reporting records including:

- Manure Applications
- Storage Inspections
- Weather logs*

* With the weather station interface, Fields and Crops Manager will keep your actual weather records, as well as a record of your weather forecasts.
